TREATMENT PLAN FOR CATS TO CREATE A FLEA-FREE HOME

Parasites are not “outdoors only”

Cats and kittens of every lifestyle – whether they live indoor only, indoor/outdoor, or outdoor only, can regularly encounter unwanted pests.

These parasites can get into any home

Parasites hitchhike indoors on other pets or creatures, on shoes and clothes, or get inside through doors and windows. To get rid of any fleas or parasites that might be on your cat do all of the following as thoroughly as possible.

- ♥ Treat any cats in your house with Revolution® Plus and if you have any dogs treat them with Simparica®.
- ♥ Vacuum your house regularly. You may need to move sofas, beds and surrounding furniture in your house to ensure you give it a good clean.
- ♥ Throw out any cushions or throws that you think could have infestations.
- ♥ Vacuum the car if your pets have been in it.
- ♥ Wash any household bedding in hot water at least 60°C.

Parasites tend to like warmer months and that's when you might see your cat licking and grooming their coat more frequently.

To keep your family and cat flea-free it's important to give them a flea treatment every month, so that you can avoid any potential outbreaks.
